

e-zone

DUCTED AIR-CONDITIONING.

ADVANTAGE AIR®

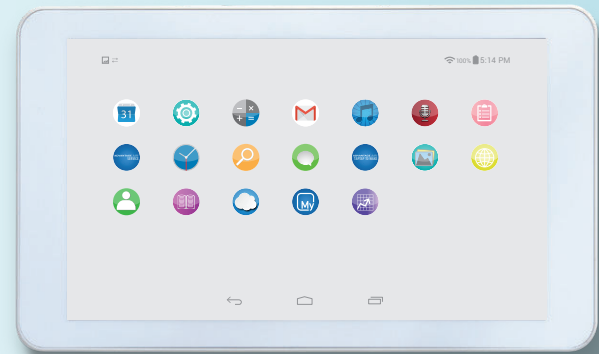

EASY COMFORT AND CONTROL.

e-zone's 7-inch colour touchscreen doubles as a tablet. Now you can manage your comfort and your home from one central hub.

The e-zone screen is easy to read and simple to navigate. The home screen displays the essentials: whether the system is on or off, set to heating or cooling, the set temperature and fan speed.

You can control the rest of your home with the same ease. With a tap of the Android icon you can stay in touch with loved ones, search a recipe and watch videos while you cook. As the touchscreen is wired to the wall, it never goes missing and never needs charging.

MORE CONTROL AND CONVENIENCE WITH THE e-zone APP.

The e-zone app turns your other smart devices into additional remote controls. It works through your Wifi, and lets you access and control your air-conditioning both from within the home and anywhere in the world. True comfort is being in total control. For compatibility details visit advantageair.com.au/support

CONTROL IS INTUITIVE.

Our features are also easy to use, for example if you tap on Events this feature gives you the ability to automatically run "Tasks" when specific weather events occur in your area! The two "Conditions" you can monitor are suburb temperatures and clear or sunny weather forecasts.

This means you can set your air-conditioner to switch on when a designated temperature is reached in your area or at the time that is right for your solar saving you costs on your energy bills.

Away from home? Events will also be able to send a notification when a "condition" occurs to your smartphone or tablet, meaning you are always connected and in control of your home.

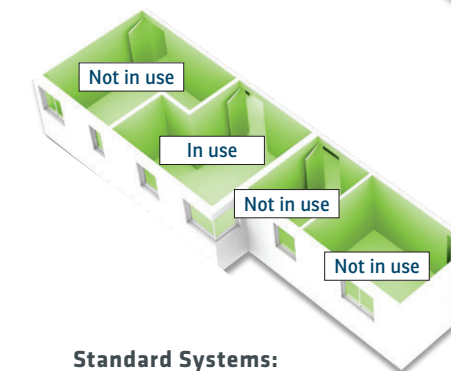

Events can be set to the specified times each day that suit your lifestyle and with up to 20 events available on each unit there are plenty of ways to look after your home.

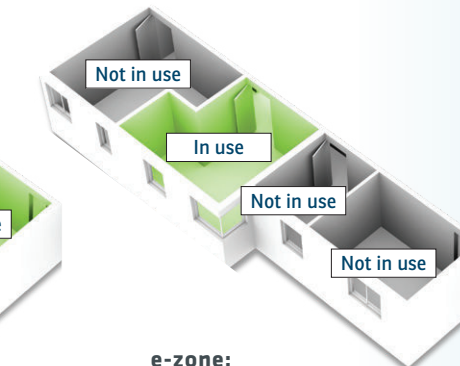

ZONES.

To control how much air goes where, press the Zones button. The Zones screen will display every room in your home. To open or close a zone, simply tap on the room name, or to adjust the airflow press the plus or minus button. If the room has a temperature sensor, the number displayed will be the temperature desired in that zone.

Standard Systems:

If all bedrooms are on one zone, they are all air-conditioned together, even when some are not in use.

e-zone:

When every room is zoned separately you only air-condition the rooms you are using.

ENGINEERED TO SAVE ENERGY WITH 10 ZONES.

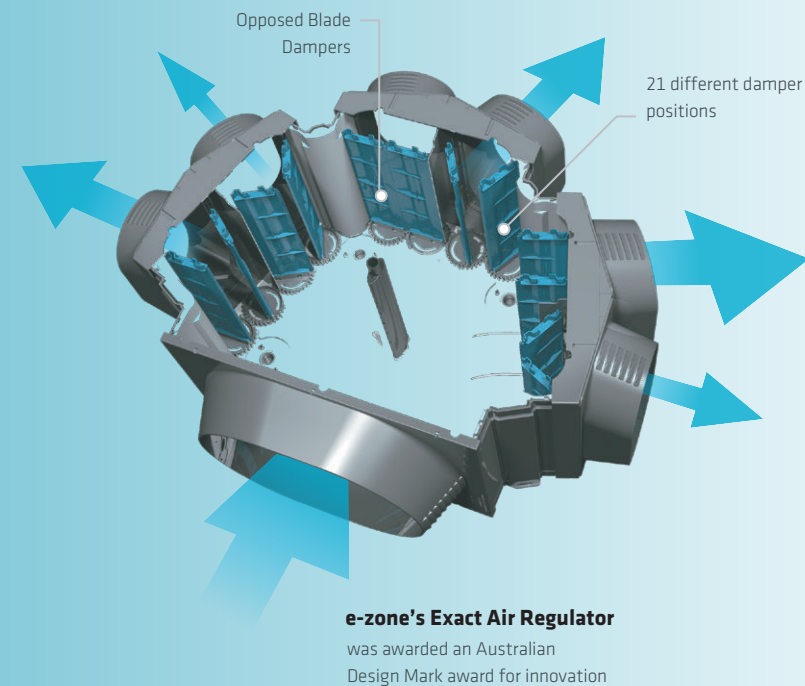

e-zone is engineered for improved air management and maximum energy efficiency. As e-zone has up to 10 zones, each room can be controlled independently. You control which rooms receive conditioned air so there's no paying to heat or cool empty rooms.

This is in contrast to standard systems that have only 4 or 5 zones, and therefore have to group several rooms in each zone. You may only be using 3 rooms, but you could be paying to run the system in nearly the whole house.

PRECISION AIRFLOW FOR PERFECT COMFORT.

You not only control which rooms receive air, you determine how much. With e-zone you can adjust the airflow to any room from 5 to 100% output, in 5% increments. Everyone can customise the airflow to their room, to their personal preference.

THE COMPONENTS OF PRECISION AIR MANAGEMENT.

In standard systems, dampers look like a large metal tube with a circular internal scoop that pivots to increase or decrease airflow. As the scoop opens a little, very little change in airflow occurs. As it opens a little more, you get a large change in airflow due to its shape.

As we couldn't achieve the level of airflow control we were after with conventional dampers, we designed our own: the Exact Air Regulator. Instead of a single scoop it has Opposed Blade Dampers (OBDs). Think of them as a series of double doors that can open and close in 5% increments. As the air goes where it is needed, you achieve your preferred temperature as energy efficiently as possible.

The Exact Air Regulator rewards you with smoother, quieter, more even airflow, and rewarded Advantage Air with an Australian Design Mark award for innovation.

SCENES.

Your e-zone system can be scheduled to turn on or off and run a pre-selected series of settings for your zones at your required time. Simply set the system the way you would like it to be, and go to the Scenes page and press the + button to create a new scene. Choose your air-conditioning settings, set the time you would like that scene to start and stop, and then select the days of the week that you would like it to run. You can do this for up to 10 different scenes.

EZCOMFORT TEMPERATURE CONTROL.

ezcomfort is a trio of features aimed at giving you more control of your home's climate – Temperature Control, ezsleeper and ezfan. Temperature Control includes eztemp and ezauto features.

There can be huge temperature discrepancies between different rooms in your house, depending on their orientation to the sun and whether they are upstairs or

downstairs. With standard systems hot and cold spots are unavoidable as they only have one thermostat, with no option to adjust the airflow to each room.

With e-zone you have the ability to manually send more air to the hotter rooms. However, if you'd prefer everything to be adjusted automatically, there's individual temperature control (ITC). Each ITC sensor is like a thermostat, they instruct the system

to continually adjust the airflow to maintain your selected temperature.

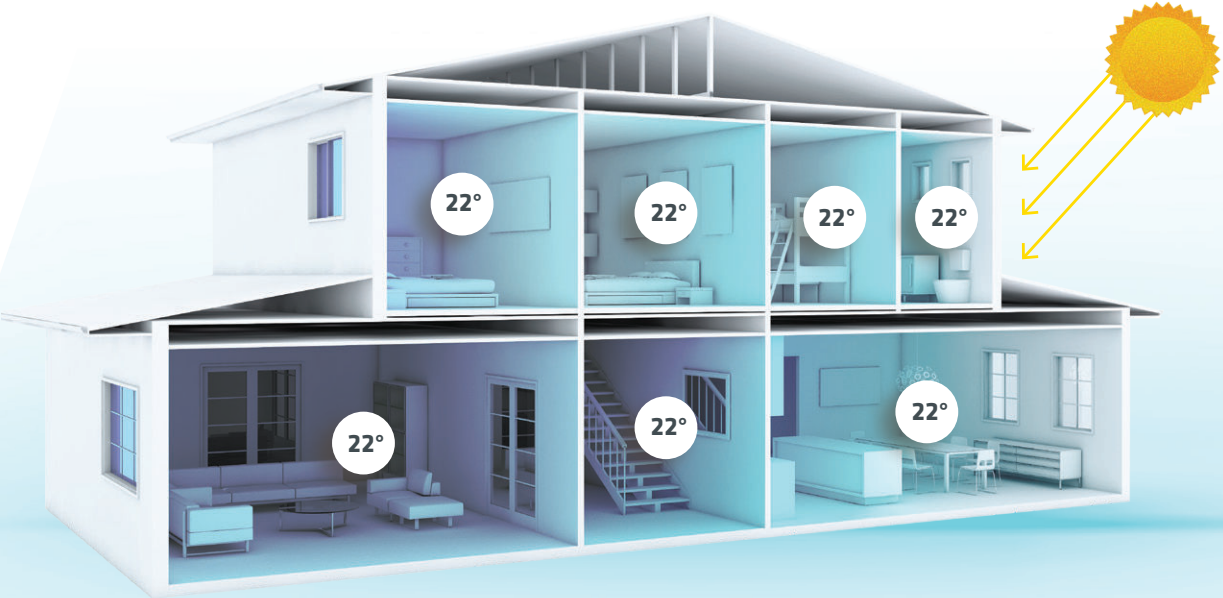

We recommend installing ITC in the hotter rooms or upstairs to ensure they stay the temperature you want.

For full temperature automation at the touch of a button you can set ezauto.

ezauto is based on a fixed temperature range of 20-24 degrees and will change your air-conditioning mode between cooling and heating to get your zones to this desired range.

ezauto is perfect for spring or autumn with warmer temperatures during the day and cold nights.

This feature allows e-zone to automatically adjust the unit fan speed to help control the airflow throughout your home.

MORE CHOICE WITH MYZONE.

On your touchscreen, you may notice one room has a dark grey thermometer symbol next to it.

This indicates it has been selected as the MyZone, the room that acts as a thermostat for the system. MyZone can be any room with an ITC sensor, and it gives you more choice and control over how you run your air-conditioning.

For optimum comfort in summer, select the hottest room in your home as MyZone. This ensures every room with ITC will achieve the temperature you have set. The MyZone feature is optional - ask your e-zone Dealer about this feature.

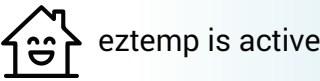

EZTEMP.

Taking our original MyZone feature to the next level, eztemp will actively work to achieve the desired temperature of each zone and maintain this temperature throughout the day.

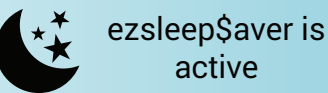

Simply turn your air-conditioner on and let us do the rest, no more adjusting or playing around to get optimal temperatures throughout your entire home.

Once all zones have met the desired temperature your unit will begin to cycle down to conserve energy.

EZSLEEP\$AVER.

At night you can choose ezsleeper, this mode will automatically change the mode of your air-conditioning system from cooling to fan and continue circulating air through the house from 10pm to 6am. This will save money on your energy bills during those hot summer nights and help reduce noise for your neighbours.

THE ADVANTAGE OF AUSTRALIAN-MADE.

e-zone is designed by Advantage Air, a family-owned Australian company that started out designing and manufacturing innovative ducted air-conditioning. In the last 20 years we have focussed more specifically on smart electronic control systems, including e-zone.

In this time we have earned a reputation for producing reliable, world-class products that make daily life easier and more comfortable. We take pride in designing and creating an Australian product that is world class. To achieve this, we embrace technology and invest heavily in research and development.

Our ingenious engineers have developed numerous industry firsts and earned us a number of patents, registered designs and design awards in the process. We are committed to quality and where possible, make our components in Australia.

Our consumer support centre is also based in Australia, so you'll always receive friendly, local support when you contact MyTeam.

CONSUMER SUPPORT.

At Advantage Air we are committed to the quality and user experience of our products, which is why we have our own consumer support centre. Whether it is to step you through an app update, assist with getting your e-zone and your WiFi talking to each other, or just to go over how to get the most out of your system, we are here to help. You can take comfort in the fact that it is staffed internally, not outsourced, assuring the quality of advice and service you will receive.

Note: Although most apps and routers work with our touchscreens there will be some that are not compatible. Please let us know if you have issues so that we can assist where possible.

WALL MOUNTED TOUCHSCREEN.

Advantage Air touchscreens are manufactured with a static Android version, therefore standard Android operating system updates are not available. Only critical Android updates will be allowed.

COMPATIBILITY.

For details on compatible phones and devices please visit our website; www.advantageair.com.au/support

ACTIVATION CODE.

e-zone has an activation feature. A code may be required from your installer to activate your system after 21 days.

PEACE OF MIND WARRANTY.

Advantage Air components are well known in the industry for their quality, precision, strength and durability. To prove our confidence, we provide a;

- 10-year warranty on all ducting and mechanical components
- 5-year warranty on all electronic controls
